

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

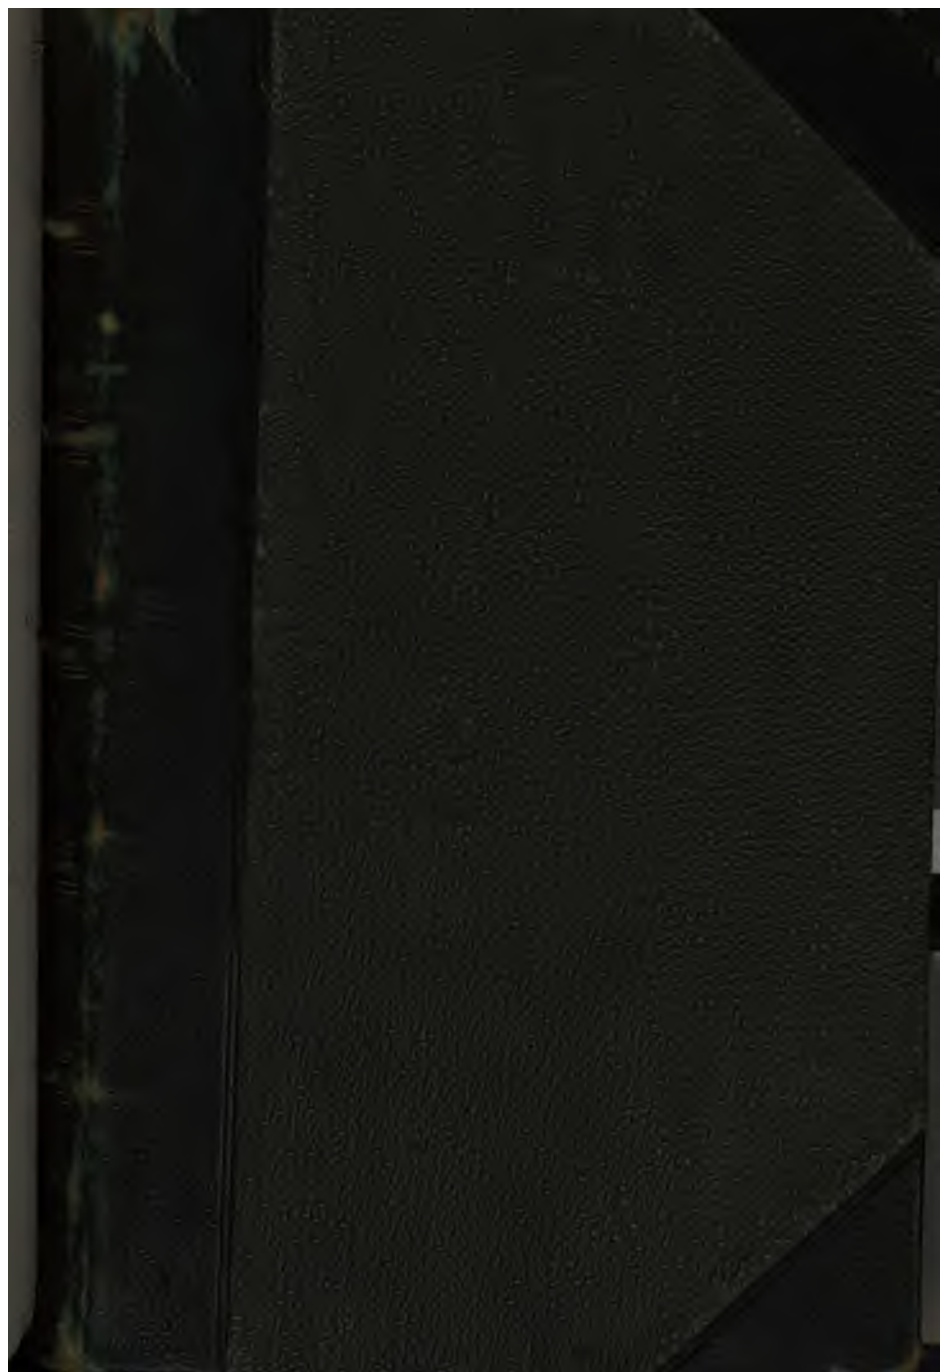

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

LIST
OF THE
SPECIMENS
OF
BRITISH ANIMALS
IN
THE COLLECTION
OF THE
BRITISH MUSEUM.

PART XII.—LEPIDOPTERA,
(CONTINUED).

PRINTED BY ORDER OF THE TRUSTEES.
LONDON, 1852.

LONDON :
PRINTED BY EDWARD NEWMAN,
9, DEVONSHIRE ST., BISHOPSGATE.

INTRODUCTION.

THE principal object of the present Catalogue has been to give a complete list of all the CRAMBIDÆ that have been recorded as found in Great Britain, indicating at the same time those species that are contained in the Collection.

This part of the Catalogue has been prepared by the late JAMES FRANCIS STEPHENS, Esq., so well known for his works on British Insects, for the extent of his cabinet, and the liberality with which he allowed it to be consulted, and who died unexpectedly while the first sheet was in the press.

Mr. Stephens has endeavoured to arrange these insects according to their natural affinities, so far as is practicable with a local collection ; and has taken great pains to ascertain every name which has been applied to the respective species and their varieties, the author of the same, and the date of publication ; the references to such names as are unaccompanied by descriptions being included in parentheses : all are arranged chronologically, *excepting those to the illustrations and to the figures, which invariably follow their authorities.*

The species in the British Museum Collection are indicated by the letters, B. M., annexed; while those in the Synoptic List, to which doubt is attached as to their indigenous pretensions, are distinguished by an asterisk (*) prefixed.

NOMENCLATURE OF HYMENOPTERA.

LONDON:
PRINTED BY ORDER OF THE TRUSTEES.
1953.

PRINTED BY TAYLOR AND FRANCIS,
RED LION COURT, FLEET STREET.

INTRODUCTION.

THE principal object of the present Catalogue has been to give a complete list of the species of the HYMENOPTEROUS INSECTS that have been recorded as found in Great Britain, with their principal Synonyms.

It is intended for the following purposes :—

As a Complete List of the species at present known as inhabiting the British Islands.

As Labels for the Cabinet, for which purpose it has been printed in a peculiar type and only on one side of the paper.

The Collection contains almost every species in the list, and it consists of the type specimens described by the Rev. WILLIAM KIRBY, Dr. LEACH, Mr. JAMES FRANCIS STEPHENS, Mr. FRANCIS WALKER and Mr. FREDERICK SMITH.

The Catalogue has been prepared by Mr. FREDERICK SMITH, who has paid so much attention to this order of Insects.

The image is a dark, blurry, and low-contrast scan of a document page. It appears to be a very poor quality reproduction, possibly from a microfilm or a very old, faded document. The content is illegible due to the extreme blurriness and low contrast. There are faint, dark shapes that might represent text or figures, but they cannot be discerned. The overall appearance is that of a failed scan or a severely degraded document page.

the boat was a small, light-colored motorboat, and it was moving slowly across the water. The water was dark and choppy, and the sky was a pale, hazy blue. The boat was positioned in the upper left quadrant of the frame, and it was moving towards the right. The overall image is grainy and has a vintage feel.

LIST
OF THE SPECIMENS OF
BRITISH ANIMALS
IN
THE COLLECTION
OF THE
BRITISH MUSEUM.

PART XIV.
NOMENCLATURE OF NEUROPTERA.

LONDON:
PRINTED BY ORDER OF THE TRUSTEES.
1853.

PRINTED BY TAYLOR AND FRANCIS,
RED LION COURT, FLEET STREET.

INTRODUCTION.

THE principal object of the present Nomenclature has been to give a complete list of the species of the **NEUROPTEROUS INSECTS** that have been recorded as found in the British Islands, with their principal Synonyms.

It is intended for the following purposes :—

As a Complete List of the species at present known as inhabiting the British Islands.

As Labels for the Cabinet, for which purpose it has been printed in a peculiar type and only on one side of the paper.

The Collection contains almost every species in the list, and it consists of the type specimens described by **DR. LEACH**, **MR. JAMES FRANCIS STEPHENS**, **MR. CURTIS**, and **MR. FRANCIS WALKER**.

The Nomenclature has been prepared by **MR. ADAM WHITE** from **MR. WALKER**'s Catalogue of the **NEUROPTERA**, and **M. DE SELYS LONGCHAMP**'s work on the **EUROPEAN LIBELLULIDÆ**.

NOMENCLATURE OF DIPTERA. I.

LONDON:
PRINTED BY ORDER OF THE TRUSTEES.
1853.

INTRODUCTION.

THE principal object of the present Nomenclature has been to give a complete list of the species of the **DIPTEROUS INSECTS** that have been recorded as found in the British Islands, with their principal Synonyms.

It is intended for the following purposes :—

As a Complete List of the species at present known as inhabiting the British Islands.

As Labels for the Cabinet, for which purpose it has been printed in a peculiar type and only on one side of the paper.

The Collection contains most of the species in the list, and it consists of the type specimens described by **Dr. LEACH, Mr. JAMES FRANCIS STEPHENS, Mr. CURTIS,** and **Mr. FRANCIS WALKER.**

The Nomenclature has been prepared by **Mr. ADAM WHITE** from **Mr. WALKER's** two volumes on the British Diptera in the "**Insecta Britannica.**"

The remainder of the Diptera, containing the **NEMOCERA,** will soon be published.

JOHN EDWARD GRAY.

PART XVI.—LEPIDOPTERA (COMPLETED).

PRINTED BY ORDER OF THE TRUSTEES.

INTRODUCTION.

THE principal object of the present Catalogue has been to give a complete list of all the smaller Lepidopterous Insects that have been recorded as found in Great Britain, indicating at the same time those species that are contained in the Collection.

This Catalogue has been prepared by H. T. STANTON, Esq., so well known for his works on British Micro-Lepidoptera, for the extent of his cabinet, and the liberality with which he allows it to be consulted.

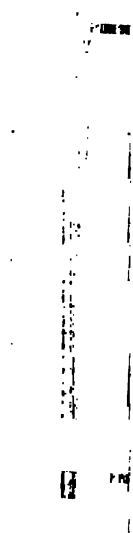

Mr. Stainton has endeavoured to arrange these insects according to their natural affinities, so far as is practicable with a local collection ; and has taken great pains to ascertain every name which has been applied to the respective species and their varieties, the author of the same, and the date of publication ; the references to such names as are unaccompanied by descriptions being included in parentheses : all are arranged chronologically, excepting those to the illustrations and to the figures which invariably follow their authorities.

The species in the British Museum Collection are indicated by the letters B. M., annexed.

LIST
OF THE SPECIMENS OF
BRITISH ANIMALS
IN
THE COLLECTION
OF THE
BRITISH MUSEUM.

PART XVII.
NOMENCLATOR OF ANOPLURA, EUPLEX-
OPTERA AND ORTHOPTERA.

LONDON:
PRINTED BY ORDER OF THE TRUSTEES.
1855.

INTRODUCTION.

THE principal object of the present Nomenclator has been to give a list of the various Insects of the Orders ANOPLURA, EUPLECHOPTERA and ORTHOPTERA that have been recorded as found in the British Islands, with their principal Synonyms.

It is intended for the following purposes:—

As a Complete List of the species recorded as found in the British Islands.

As Labels for the Cabinet, for which purpose it has been printed in a peculiar type and only on one side of the paper.

The Collection contains almost every species in the list, and it consists of the type specimens described chiefly in the works of Messrs. DENNY and STEPHENS.

The Nomenclator has been prepared by Mr. ADAM WHITE, chiefly from Mr. DENNY's work on the British Anoplura, and Dr. FISCHER's work on the European Orthoptera.

JOHN EDWARD GRAY.
